For more than 40 years

# Seilo® CRYL

The fast floor solution

Seilo® CRYL coating systems are suitable for many fields of application:

- Meat processing industry
- Baked goods
- Kitchens
- Beverage industry
- Automotive industry
- Surgeries
- Shops

Advantages of the Seilo® CRYL coating system:

- Extremely fast curing, fully loadable after 2 hours
- Renovation without interruption of operations
- Joint-less, hygienic, easy to clean
- Excellent chemical resistance
- Decorative appearance with coloured quartz and chips
- Smooth or slip-proof variant
- Installation possible also at temperatures below 0 °C
- High compressive strength and resistance to abrasion
- Suitable for new buildings and renovation on various substrates

Distribution and installation in Germany, Austria, Switzerland and a lot of other countries.

and installation

# Seilo® CRYL The fast floor solution

Seilo® CRYL floor coating systems consist of low to medium-viscous, solvent-free methacrylate reaction resins (MMA), integrated in a two-component system. Due to their physical and chemical properties, Seilo® CRYL coatings prevent the ingress of fluids and dirt, thus providing durable protection of industrial floors in trade and industry.

Seilo® CRYL is suitable for nearly all areas, for example in enterprises that process foodstuffs where stringent demands are placed on hygiene and safety at work.

Thanks to their excellent compressive strength and resistance to abrasion, Seilo® CRYL coatings are also ideal for areas with increased mechanical stress exerted by fork lift trucks and lifting carts.

## Individual design

Seilo® CRYL floor coatings can be designed to suit the architecture, equipment or corporate design of your company.

With the help of coloured chips, colour quartz and pigments, industrial floors can be attractively designed according to the customer's wishes.

We would be pleased to send you brochures and samples to demonstrate the colour concepts.

## Safety and hygiene

The Seilo® CRYL coating complies with all currently valid safety and hygiene regulations of the food processing industry. The surface structure can be designed individually according to the requirements of the relevant sector.

On rising building parts, the coating can be applied in the form of a rounded corner in line with EC Directives. This allows ease of cleaning and prevents the accumulation of dirt.

Seitz + Kerler GmbH + Co. KG with headquarters in Lohr am Main in the middle of Germany has distributed the Seilo® CRYL synthetic resin floor for more than 40 years.

We have been active with great success in the renovation of old substrates with sufficient load-carrying capacity such as concrete, tiles, asphalt, and in the installation of industrial floors in new buildings of any kind.

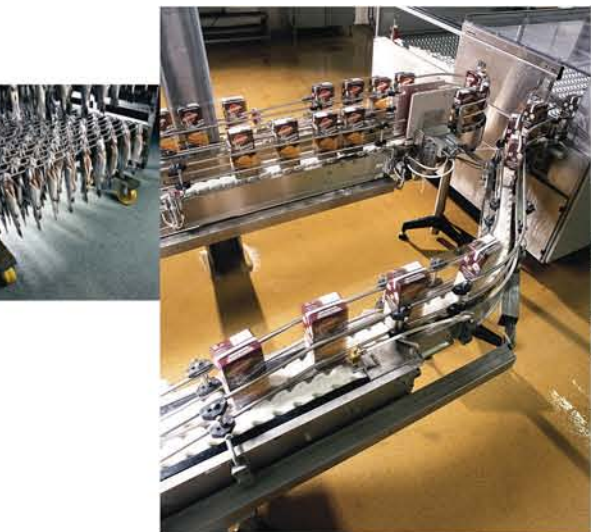

After detailed and competent advisory service at the customer's premises, our experienced and well attuned application teams prepare the substrate and coat the floor.

Benefit from our experience gained over more than 50 years in the field of floors.

## Installation

Depending on the size of the rooms, 50 to 400 m<sup>2</sup> of Seilo® CRYL synthetic resin coating can be applied per day. Seilo® CRYL coatings are fully loadable after two hours.

Seilo® CRYL acrylic resin coatings can be applied as dust-binding impregnations, as coloured seal coats, self-levelling, trowel-down or scatter coatings in thicknesses of 0.5 to 8 mm.
