- Optional tear tape system

Cpack's new **CO600** based on our popular CP6 machine is a semi-automatic envelope folding machine. Capable of folding up to 600 products per hour this is an excellent system for clients that do not require a fully automatic Machine. This machine produces an envelope fold giving your products a tight and moisture resistant seal protecting your items and increasing sales appeal.

The computer control system allows easy change over from one product to another. For maximum flexibility, the versatility of the machine allows for a wide range of products to be overwrapped in a smart envelope fold.
