

LAWS AND REGULATIONS

Our aim is to enable working safe and healthy for everyone. Therefore, all Neskrid products meet the essential European health and safety requirements in accordance with the following Regulations:

► **Regulation EU/2017/745 for Medical Devices (MDR)**

Orthopaedic and semi-orthopaedic solutions are medical devices, because they (preventively) help against different types of health issues. This requires them to comply with the European Regulation EU/2017/745 for Medical Devices (MDR). Both Neskrid and 4Allbrands products are therefore legally certified as a Medical Device.

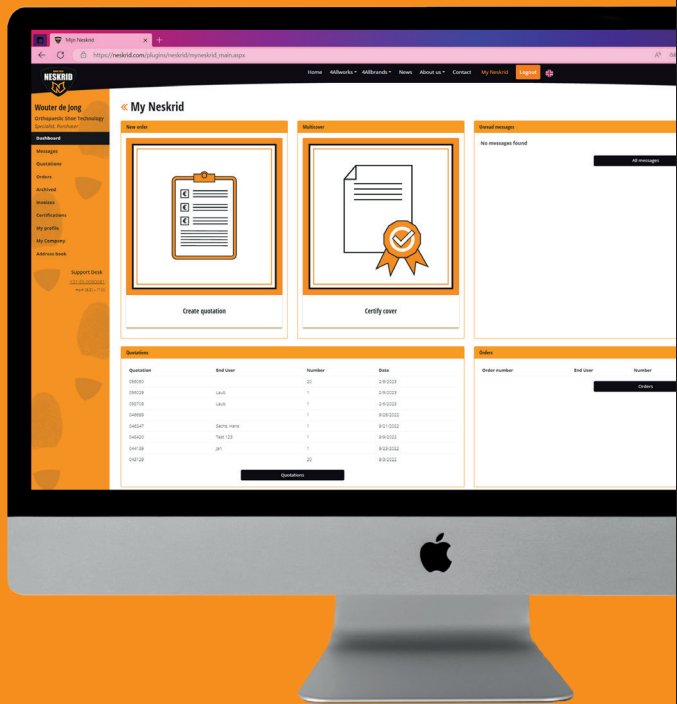

► **Regulation EU/2016/425 for Personal Protective Equipment (PPE)**

Work and safety footwear and (semi-) orthopaedic insoles worn in combination with work or safety footwear are personal protective equipment. This means that they must comply with the European Regulation EU/2016/425 for Personal Protective Equipment (PPE). To ensure that all Neskrid work or safety shoes comply with this, they are certified by an accredited test institute. The 4Allbrands insoles are tested and approved by an accredited test institute in accordance with the associated standards.

NOCS

Neskrid has developed the unique Neskrid Online Customer System (NOCS) to serve its customers even better. In the NOCS system, a foot specialist has the option (with a personal account) to configure the Neskrid products entirely according to his own wishes. This includes choosing versions, materials and soles, but also the application of required orthopaedic adjustments. In addition, your personal account provides insight into historical data (quotations, orders, invoices) and you can easily retrieve and download all mandatory documents.

NESKRID 4ALLFEET

MULTIFUNCTIONAL ORTHOPAEDIC FOOTWEAR SOLUTIONS

NESKRID IS THE SPECIALIST IN ORTHOPAEDIC SOLUTIONS FOR DIFFERENT TYPES OF FOOTWEAR.

Thanks to our in-house factory, we are able to produce (semi-)orthopaedic shoes or (semi-)orthopaedic insoles for every foot at any time. These all meet the essential European health and safety requirements.

To achieve the highest possible quality standards, we collaborate with foot specialists throughout Europe. In this way we make safe and healthy motion sustainably available, with minimal orthopaedic limitations and maximum performance.

CERTIFIED ORTHOPAEDIC WORK AND SAFETY FOOTWEAR

Neskrid 4Allworks shoes are unique, because they are still fully certified as a work or safety shoe in combination with orthopaedic adjustments.

(SEMI-)ORTHOPAEDIC INSOLES

With 4Allbrands, Neskrid offers a revolutionary solution, namely **one** manufacturer for orthopaedic insoles in **all** models of brands of work or safety footwear. This eliminates the need for you as a foot specialist to buy material per brand and finish your insoles according to different protocols. In addition, we also offer a solution for retailers with our semi-orthopaedic insoles.

REGULAR AND ORTHOPAEDIC OUTDOOR FOOTWEAR

Neskrid recently introduced a collection of Outdoor shoes with 4Alltimes. These are walking shoes made of high-quality materials. The models are very comfortable and offer optimal support for various outdoor activities.

Within 4Allworks, you can choose from a wide range of work and safety shoes. These models are all fully configurable in NOCS and can be ordered in the following four product categories:

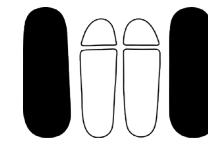

ORTHOPAEDIC INSOLES

Orthopaedic insoles are completely custom-made according to the individual feet of the end user. Measuring the feet and modelling the insoles are completely taken care of by you as the foot specialist. This allows you to apply all necessary medical corrections. However, it is important that the orthopaedic insoles fully comply with all legal requirements. To ensure this, Neskrid offers the following product options:

Sole

Orthopaedic insoles manufactured and finished by 4Allbrands

Kit

Orthopaedic insoles manufactured by 4Allbrands with separate cover material.

Cover

Separate cover material including instruction protocol for safe application.

Multicover

Separate cover material in bulk packaging including instruction protocol for safe application. *Retrospective certification is necessary!*

The Outdoor collection is fully configurable in NOCS as desired. You can choose from four product categories:

A CUSTOM ORTHOPAEDIC WORK OR SAFETY FOOTWEAR

Fully customised work or safety footwear, based on individual lasts manufactured by the foot specialist.

B SEMI-ORTHOPAEDIC WORK OR SAFETY FOOTWEAR

Work or safety footwear based on a standard last, fully customisable in different widths.

C REGULAR WORK OR SAFETY FOOTWEAR WITH ORTHOPAEDIC FEATURES

Standard models of work or safety footwear, available in various widths. Also configurable with (orthopaedic) sole adaptations.

X REGULAR WORK OR SAFETY FOOTWEAR

Standard models of work or safety footwear in various width and length sizes. These models can be ordered in pairs or bulk packaging without adjustments.

SEMI-ORTHOPAEDIC INSOLES

The semi-orthopaedic insoles provide support for feet that have a lot to endure every day and can therefore use some extra comfort. These insoles can provide (preventive) relief for certain complaints.

Currently, 4Allbrands offers three variants of semi-orthopaedic insoles. Each of these have unique properties for a specific comfort or to remedy or prevent certain (foot) complaints.

All are available in three different types of arches for proper arch support: low for flat feet, medium for standard feet, high for hollow feet. The 4Allbrands footdisc can be used to determine which archetype the end user needs.

Classic

Provides foot arch support and extra comfort.

Anatomical

Provides extra comfort, arch support and corrects overpronation.

Stabilizer

Provides extra comfort through arch support, metatarsal support and shock absorption. It also provides extra stability due to the deep cup.

A ORTHOPAEDIC WALKING SHOES

Fully customised walking shoes, based on individual lasts manufactured by the foot specialist.

B SEMI-ORTHOPAEDIC WALKING SHOES

Walking shoes based on a standard last, fully customisable in different widths.

C REGULAR WALKING SHOES WITH ORTHOPAEDIC FEATURES

Standard models of walking shoes, available in various widths. Also configurable with (orthopaedic) sole adaptations.

X REGULAR WALKING SHOES

Standard models of walking shoes in various width and length sizes. These models can be ordered in pairs or in bulk packaging without adjustments.
